*Congratulations on choosing our product!*

*We thank you for your custom.*

*Please note that this product, as all the others in the rich our range, has been designed and made with total quality to ensure excellent performance and best meet your expectations and requirements.*

Carefully read this instruction manual in its entirety and keep it safe for future reference. It is essential to know the information and comply with the instructions given in this manual to ensure the fitting is installed, used and serviced correctly and safely.

Our factory disclaims all liability for damage to the fitting or to other property or persons deriving from installation, use and maintenance that have not been carried out in conformity with this instruction manual, which must always accompany the fitting. Our factory reserves the right to modify the characteristics stated in this instruction manual at any time and without prior notice.

**• Installation**

Make sure all parts for fixing the projector are in a good state of repair. Make sure the point of anchorage is stable before positioning the projector. The safety chain must be properly hooked onto the fitting and secured to the framework, so that, if the primary support system fails, the fitting falls as little as possible. If the safety chain gets used, it needs to be replaced with a genuine spare.

**• Minimum distance of illuminated objects**

The projector needs to be positioned so that the objects hit by the beam of light are at least 0.20 metres (8") from the lens of the projector.

**• Minimum distance from flammable materials**

The projector must be positioned so that any flammable materials are at least 0.20 metres (8") from every point on the surface of the fitting.

**• Mounting surfaces**

It is permissible to mount the fitting on normally flammable surfaces.

$t_a$  40°C

**• Maximum ambient temperature**

Do not operate the fixture if the ambient temperature ( $T_a$ ) exceeds 40° C (104° F).

IP20

**• IP20 protection rating**

The fitting is protected against penetration by solid bodies of over 12mm (0.47") in diameter (first digit 2), but not against dripping water, rain, splashes or jets of water (second digit 0).

**• Protection against electrical shock**

Connection must be made to a power supply system fitted with efficient earthing (**Class I** appliance according to standard EN 60598-1).

It is, moreover, recommended to protect the supply lines of the projectors from indirect contact and/or shorting to earth by using appropriately sized residual current devices.

**• Connection to mains supply**

Connection to the electricity mains must be carried out by a qualified electrical installer. Check that the mains frequency and voltage correspond to those for which the projector is designed as given on the electrical data label.

This label also gives the input power to which you need to refer to evaluate the maximum number of fittings to connect to the electricity line, in order to avoid overloading.

$t_c$  90°C

**• Temperature of the external surface**

The maximum temperature that can be reached on the external surface of the fitting, in a thermally steady state, is 90°C (194°F).

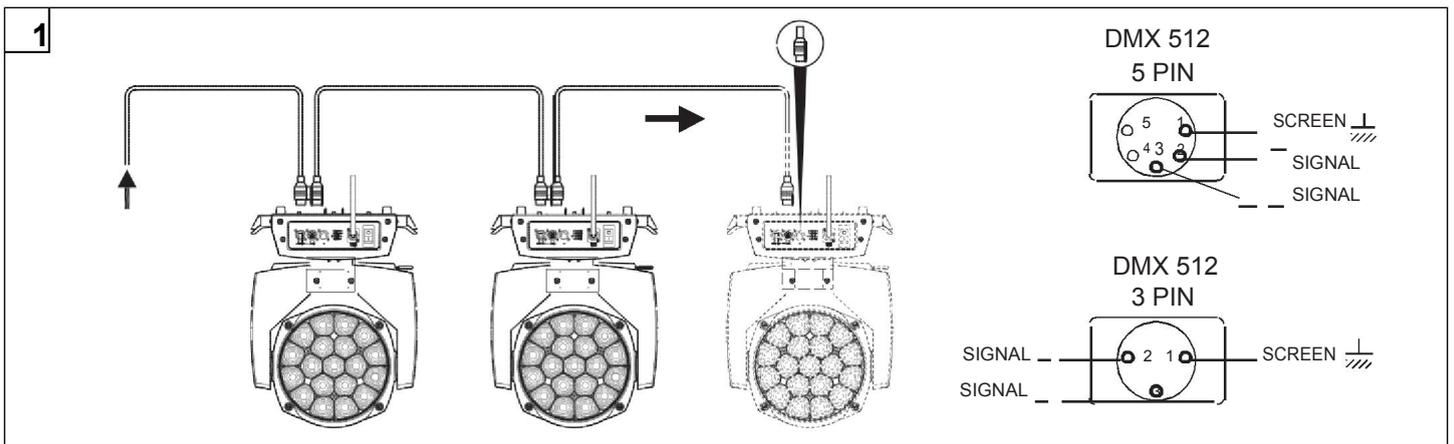

**• Maintenance**

Before starting any maintenance work or cleaning the projector, cut off power from the mains supply.

**Factory Menu:**

On the LCD show "Display System" press OK button 5 seconds  
 Code:XXXXXXXXXX

 KEY2:XXXXXXXXXX  
 KEY3:XXXXXXXXXX

Connecting to the mains supply - Fig. 1

Connecting to the control signal line (DMX) - Fig. 1

Use a cable conforming to specifications EIA RS-485: 2-pole twisted, shielded, 120Ohm characteristic impedance, 22-24 AWG, low capacity. Do not use microphone cable or other cable with characteristics differing from those specified. The end connections must be made using XLR type 3 or 5-pin male/female connectors. A terminating plug must be inserted into the last projector with a resistance of 120Ohm (minimum 1/4 W) between terminals 2 and 3.

**IMPORTANT:** The wires must not make contact with each other or with the metal casing of the connectors. The casing itself must be connected to the shield braid and to pin 1 of the connectors.

**MENU SETTING**

## CAUSE AND SOLUTION PROBLEMS

THE PROJECTOR WILL NOT SWITCH ON				PROBLEMS
ELECTRONICS NON-OPERATIONAL				
DEFECTIVE PROJECTION				
REDUCED LUMINOSITY				
		POSSIBLE CAUSES	CHECKS AND REMEDIES	
		No mains supply.	Check the power supply voltage.	
		LED exhausted or defective.	Call an authorized technician.	
		Signal transmission cable faulty or disconnected.	Replace the cables.	
		Incorrect addressing.	Check addresses (see instructions).	
		Fault in the electronic circuits.	Call an authorized technician.	
		Lenses or reflector broken	Call an authorized technician.	
		Dust or grease deposited.	Clean (see instructions).	

### CAUTION:

- To avoid damage to the internal parts of the fixture when the fixture is not working, is recommended to turn the head down before turning the fixture off, so that the front lenses of the fixture are invested as little as possible from the sun.
- Set channel 20 (Zoom) to 100% (255-bit) before turning off the projector to facilitate the packaging of the projector.
